

Introducing PsyNote™ 2010

More than two years of planning, research, design, and thought has finally resulted in the most asked for product in the Psych profession:

An easy to use, easy to implement, and full service billing & document management tool.

PhyBill, Inc. with twenty years of experience in billing and managing psych practices has developed PsyNote™, an EMR (electronic medical record) specifically designed for both psychological and psychiatric practices. No matter your practice nuances; office, inpatient, nursing home, clinic, etc, this will ease your transition into the high tech world. The benefits, too numerous to list in their entirety include:

- Simple easy interface with your existing computer (PC Only)
- We install, train, and support, including all updates.
- We archive and back up your data
- Complies with all HIPAA and section 490 security requirements
- One step review of a patients entire visit history
- Automatically submits billing at your direction
- Automatically confirms successful submission
- Print, fax, or e-mail documentation at your direction
- Seamless updates and additions

One brief look, and you'll agree, this is what you've been waiting for. Other EMR's are complicated, too generic, take forever to customize for your practice, are very costly, require you to back-up and keep secure, and frankly, do not help streamline your daily workflow.

And here's the best news; PsyNote™ is offered at no cost, no charge, no monthly fee; nada, zip, garnished, with a competitively priced billing agreement.

If you love it but do not need our superior billing/collection services, we can work that out too!
